cn_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Tabular output not generated. Mon Mar 13 10:34:56 2000; MasPar time 6.76 Seconds 353.990 Million cell updates/sec

Description: Perfect Score: Title: >US-09-147-947-6 (447-547) from US09147947A.pep (6 of 6) 757

Searched: 188963 segs, 23686106 residues

Scoring table: Sequence:

PAM 150 Gap 11

1 VRLMDGENKKEGRVEVFING.....KQDIGRHNCRHSEDAGVICD 101

Post-processing: Minimum Match Listing first 0% 45 summaries

Database: a-geneseq35 1:geneseqp

Statistics: Mean 28.103; Variance 102.859; scale 0.273

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

tumours, treatment of neurological or lung disease, including by gene therapy and in drug development Claim 1; Page 29-32; 50pp; English.

The present sequence represents mouse neurotrypsin. Neurotrypsin p and polynucleotides can be used: (i) to inhibit tumours, including metastases, e.g. of brain or retina; (ii) to minimise tissue damage caused by stroke or brain injury (having a protective effect on the penumbra zone); (iii) to treat or prevent neurodegeneration,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     neuroinflammatory disease (e.g. multiple sclerosis) or epilepsy; (iv) t increase survival of damaged neurons (e.g. in cases of hypoxia, ischaemia, nerve transection) and to stimulate regeneration and/or restoration of synapses; (v) to treat or prevent retinal disorders (e.g. degeneration or neoangiogenesis); (vi) to prevent apoptosis (or other causes of cell death) in the nervous system; (vii) to regenerate brain and/or nervous tissue; (viii) to treat pain; (ix) to improve brain performance, including learning and memory; (x) to treat or prevent a wide range of psychiatric disorders; and (xi) to treat brain or lung
                                                                                                                                           W81363 standard; Protein; W81363; 12-APR-1999 (first entry
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is a serine protease designated BSSP-3, which is isolated from mouse brain tissue. Transformants may be used to produce the enzyme or its partial sequences. Products from the present invention are used for screening for potential peptide or non-peptide serine protease inhibitors or expression regulators for use as drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              04-FEB-1999.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (CYTRF), also known as cyclophilin C-associated protein (CYCAP).

Methods are provided for the modulation of cytokine production by T C helper cells using CYTRF (especially human CYTRF). A pharmaceutical composition comprising CYTRF as an active agent is administered in CYTRF or in vivo, and can act on mature, committed Th1 type T cells to decrease the production of pro-inflammatory cytokines, or to skew the commitment of precursor T helper cells to Th1 or a Th1 cytokine CYTRF is useful in the diagnosis and CYTRF treatment of autoimmune diseases (e.g. multiple sclerosis, CYTRF and degenerative joint diseases including and treatment of autoimmune diseases (e.g. multiple sclerosis, CYTRF and degenerative joint diseases including CYTRF and degenerative point diseases including CYTRF and degenerative arthritis), and inflammation CYTRF infection (e.g. meningitis, CYTRF encephalitis, viral meningencephalitis and viral hepatitis), CYTRF infection (e.g. meningitis, CYTRF encephalitis, CYTRF and measles) and skin sensitivity (e.g. graft crejection and graft vs host disease). CYTRF signalling and related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Ma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pathways are also useful for modelling and screening new pharmacological agents. The administration of agents that block CYTRF action (e.g antibodies) are useful in reducing unwanted allergic responses, especially in asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Reduction of pro-inflammatory cytokines in a T cell population - useful in the diagnosis using cytokine regulatory factor (CYTRF), useful in the diagnosis and treatment of pro-inflammatory conditions

Immunoregulin-95 is a 90K tumour-associated antigen purified from the culture fluid of the human breast cancer cell line, CG-5, the serum of a breast cancer patient, or the ascitic fluid mol. wt. ovarian cancer patient. The native antigen, which has a mol. wt. of bkD, is present as a high mol. wt. complex. Homology in the region has 35-80 of the 90K antigen is found with type I macrophage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        wpI; 93-152424/18.

New glyco:protein complex binding to human lectin interferes with PHA activation of lymphocytes for infectious diseases, etc.

                                     90K Tumour-associated antigen - purified from serum of breast cancer patient or ascitic fluid from ovarian cancer patient Claim 1; Figure 1; 73pp; English.

The purified 90K antigen or its antigenic determinant containin fragment can be assayed to diagnose a disorder, such as cancer especially breast or ovarian cancer) or a viral infection, inflammation, autoimmune disease and/or arthritis in a patient. It may also be used in the preperation of an agent for the treatment of these disorders.
                                                                                                                                                                                                                            02-SEP-1993; I

PS Claim 2; pages 45-48; 68pp; English.
CC 90K antigen has an apparent molecular weight of approx. 95 kd. It is
CC with cancer and also in patients with HIV. It reacts with MAb SP-2
CC which was prod. by immunising mice with proteins that had been
CC released into tissue culture fluid by human MCF-7 breast cancer
CC cells. MAb SP-2 cell line is deposited at the institut Pasteur,
CC Paris, Accession number 1-1083. 90K is also present in normal
CC subjects. It is purified from the culture fluid of the human breast
CC cancer cell line; CG-5. N-terminal sequencing of the 90K antigen
CC was used to design a 'guessmer' nucleotide sequence (Q48171) as a
CC probe to screen a lambda-gtl0 library prepd. from MCF 70ly4+ RNA.
CC The complete nucleotide sequence of isolated clones is given in
CC Gental Control of the sequence of solated clones is given in

Treatment and diagnosis of endotoxaemia and related disease states - using a polypeptide fragment of the extracellular portion of a macrophage scavenger receptor protein Disclosure; Page 38; 56pp; English.

The bovine scavanger receptor protein sequence was deduced from DNA sequence obtd. by screening a bovine lung cDNA library with degenerate probes designed based on fragments of the purified scavanger receptor protein. The scavanger receptor protein has binding capacity for acetylated low density lipoprotein (LDL) and binding capacity for acetylated low density lipoprotein (LDL) and the scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein scavanger receptor protein sc

has affinity for acetylated low density lipoprotein and
corresponding antibodies and DNA sequences.

Disclosure; 79pp; English.

Receptor protein, and fragments and analogues thereof may be
imobilised on a support and used in assay and purification of the
aldL target. Labelled Abs, raised to the protein may be injected
into the vascular system to detect the presence of atherosclerot:
                                                                                                                                                                                                                                                                                                                                03-SEP-1992.

This polypeptide and resulting antibodies can be used to treat cardiovascular diseases, including atherosclerosis, hypertension myocardial and cerebral infarction, angina, organ failure, stroke, gangrene, and loss of function in the extremities. They can also be used to treat or diagnose various macrophage and other immune cell related host defense disorders, septic shock, pancreatitis, multiple organ failure, endotoxaemia and infections caused by gram negative and content in the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the conte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  W39749

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            scavanger receptor protein inactivate endotoxin-related substances and are used in the diagnosis and treatment of endotoxaemia. They may be administered to patients at high risk of symptomatic or endotoxic shock. The fragments may also be fixed to inert supports for purificn. purposes. The fragments may be modified to have greater binding affinity for the endotoxin-related substance than
                                                                                                                                                                                                                                   gram positive bacteria. Agonists and antagonists may also be used to treat these diseases. The polynucleotide can be used to detect mutated forms of HMarcoSR which may be associated with a dysfunction and can define a diagnosis of a disease (or susceptibility to a disease)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Marco scavenger receptor; MarcoSR; mouse; antibodies; treatment; diagnosis; cardiovascular disease; macrophage; bacterial infection; immune cell related host cell disorder; pancreatitis; organ fallure; endotoxaemia; agonist; antagonist; dysfunction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the native scavanger receptor protein, or to more effectively neutralise the toxic or pathogenic effects of mols. that bind the scavanger receptor protein or of organisms which express:

PS Claim 10; Fig 2A-B; 62pp; English.
A novel macrophage receptor with a collagenous domain, named MARCO (w03561), is a membrane-bound trimeric protein which is expressed strongly after birth in a subset of macrophages in mouse spleen and lymph nodes. It binds to bacteria but not to yeast, and probably C plays a role in immune defence and/or phagocytosis. The amino acid Sequence of MARCO was deduced from DNA (see also T39340) obtd. from C a mouse macrophage cDNA library. Recombinant MARCO can be produced in transformed host cells. It is used to raise antibodies useful in detecting MARCO or interfering with its function.
                                                                                                                                                                    និនិនិនិនិ

In addition to treating Gram-positive septic shock, the MSRP can be used to screen for other compounds for treating Gram-positive septic shock. MSRP can also be used to purify, label or detect LTA or LTA-containing cells. MSRP, active MSRP fragments, anti-MSRP antibodies or other compounds that inhibit binding of Gram-positive bacteria to MSRP can be used to treat pathologies such as septicamnia, Gram-positive bacterial infection, Gram-positive septicaemia or Gram-positive or Gram-negative septic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the human macrophage scavenger receptor protein (MSRP). MSRP binds specifically to the lipoteichoic acid (LTA) residues on the Gram-positive bacterial cell wall. MSRP exhibit unusually broad binding specificity for polyanionic ligands, and have been implicated in atherosclerosis and a variety of host defence functions. This protein can be used in the method of the invention is for the treatment of septicaemia caused by Gram-positive bacteria. The method comprises administration of a MSRP in an amount sufficient to
                                                                                                                                                                                                                                                                                                                        Human SRCR protein.
Scavenger receptor cysteine rich domain; SRCR; diagnosis; treatment; nervous system; medullo-blastoma; glioma; breast; detection;

J. Clin. Invest. (1992) 90:1450-1457
Rabbit aortic smooth muscle cells express inducible
macrophage scavenger receptor messenger RNA that is
from endothelial cells.
                                                                                                                                                                                                                                                  #length

Statistics: Mean 37.831; Variance 59.275; scale 0.638

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Rec. 244:327-343(1996).

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

ALTERNATIVE PRODUCTS: TWO FORMS OF THE PROTEIN (CRP-ALPHA AN BETA) ARE PRODUCED BY ALTERNATIVE SPLICING OF THE SAME GENE.

SEQUENCE SHOWN HERE IS THAT OF CRP-ALPHA.

TISSUE SPECIFICITY: INTESTINE AND PANCREAS. IN THE COLON,

EXPRESSED IN CRYPT CELLS BUT NOT MATURE VILLUS CELLS. MOST I

EXPRESSED IN MID-CRYPT. ALSO EXPRESSED IN EPITHELIUM LINING

HERATIC AND PANCREATIC DUCTS.

ch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Mon Mar 13 10:33:26 2000; MasPar time 6.50 Seconds 464.390 Million cell updates/sec

Tabular output not generated.

Title:

Sequence:

Description: Perfect Score: >US-09-147-947-6 (447-547) from US09147947A.pep (6 of 6) 757

1 VRLMDGENKKEGRVEVFING.....KQDIGRHNCRHSEDAGVICD 101

Scoring table: PAM 150 Gap 11

Searched: 82229 seqs, 29864866 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Patabase: swiss-prot38 1:swissprot

Statistics: Mean 38.951; Variance 57.048; scale 0.683

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result-being printed, and is derived by analysis of the total score distribution.

Submitted (DEC-1996) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: RESPONSIBLE FOR INITIATING ACTIVATION OF PANCREATIC
PROTEOLYTIC PROENZYMES (TRYPSIN, CHYMOTRYPSIN AND CARBOXYPEPTIDASE
A). IT CATALYZES THE CONVERSION OF TRYPSINGEN TO TRYPSIN WHICH IN
TURN ACTIVATES OTHER PROENZYMES INCLUDING CHYMOTRYPSINGEN,
PROCARBOXYPEPTIDASES, AND PROELASTASES (BY SINILARITY).

-!- CATALYTIC ACTIVITY: SELECTIVE CLEAVAGE OF 6-LYS-|-ILE-7 BOND IN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mus musculus (Mouse).

Protein Chem. 10:475-480(1991).

-i. FUNCTION: RESPONSIBLE FOR INITIATING ACTIVATION OF PANCREATIC PROTEOLYTIC PROENZYMES (TRYPSIN, CHYMOTRYPSIN AND CARBOXYPEPTIDASE A). IT CATALYZES THE CONVERSION OF TRYPSINOGEN TO TRYPSIN WHICH IN TURN ACTIVATES OTHER PROENZYMES INCLUDING CHYMOTRYPSINOGEN, PROCARBOXYPEPTIDASES, AND PROELASTASES.

-i. CATALYTIC ACTIVITY: SELECTIVE CLEAVAGE OF 6-LYS-|-ILE-7 BOND IN TRYPSINOGEN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    use by non-profit institutions as long as its content is in modified and this statement is not removed. SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN (PROBABLE).
TISSUE SPECIFICITY: INTESTINAL BRUSH BORDER.
PTM: THE CHAINS ARE DERIVED FROM A SINGLE PRECURSOR THAT IS CLEAVED BY A TRYPSIN-LIKE PROTEASE.
SIMILARITY: CONTAINS 2 LDL-RECEPTOR CLASS A DOMAINS.
SIMILARITY: CONTAINS 2 CUB DOMAINS.
SIMILARITY: CONTAINS 1 MAM DOMAIN.
SIMILARITY: CONTAINS 1 MAM DOMAIN.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1: ALSO KNOWN AS TOUR PROTECTION OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY

"Enterokinase, the initiator of intestinal digestion, is a mosaic protease composed of a distinctive assortment of domains.";

PICC. Natl. Acad. Sci. U.S.A. 91:7588-7592(1994).

-1- FUNCTION: RESPONSIBLE FOR INITIATING ACTIVATION OF PANCREATIC PROTECTIVIC PROCENZYMES (TRYPSIN, CHYMOTRYPSIN AND CARBOXYPEPTIDASE A). IT CATALYZES THE CONVERSION OF TRYPSIN GEN TO TRYPSIN WHICH IN TURN ACTIVATES OTHER PROENZYMES INCLUDING CHYMOTRYPSINGEN, PROCARBOXYPEPTIDASES, AND PROELASTASES.

-1- CATALYTIC ACTIVITY: SELECTIVE CLEAVAGE OF 6-LYS-|-ILE-7 BOND IN
